Curtis McCall, left, of solar light company Tytre Inc. speaks with Sen. Harry Reid, D-Nev., at an alternative energy fair at the Las Vegas Springs Preserve on Tuesday.

Tytre Inc - is proud to announce its successful pilot project in the Las Vegas Springs Preserve. After a year in the harsh climate of the Nevada dessert the ML-80 from SolarPath's High-Light™ Series is still the "brightest light on the property" according to Curtis McCall of the Las Vegas based Tytre Inc.

Having first been selected by the Las Vegas Convention Center Authority as its solar fixture of choice, the Ultra Bright ML-80 was then installed as part of the Las Vegas Springs Preserve's Platinum Leadership in Energy and Environmental Design (LEED) requirements.

Although the ML-80 has proven its true grit for years in the desserts of Qatar and Dubai, SolarPath's VP of Sales, Jonathan Robins of Solar Path Inc( manufacture) was pleased to have an installation in the Las Vegas dessert. "It's fantastic to have another installation in the Las Vegas area to exhibit to our clients, especially our flagship ML-80 fixture. I had no doubt that it would surpass expectations for

performance and reliability, but I'm especially excited with its placement in the Las Vegas Springs Preserve, which is renowned for its focus on cutting-edge sustainable building practices".

The ML-80 features 648 Ultra-Bright LED's with a 130W solar panel that can operate up to 72 hours on a single sunny day charge.
